SCHEDULE OF PROPOSED ACTIONS

Enclosed is the **fourth edition of our 2004 “Quarterly Schedule of PROPOSED ACTIONS” (SOPA)**. This document will keep you posted on the status of management activities proposed for the Okanogan and Wenatchee National Forests. Some unexpected activities may require analysis after publication of this schedule. In these cases, the notice and status of the project will be included in the next quarterly schedule. The purpose of the SOPA is to provide you with informal notice of the proposed projects we plan to analyze in the coming months, and to give you a feel for the kind and amount of activity occurring.

The Schedule of Proposed Actions is now available on our web sites: **www.fs.fed.us/r6/oka/newsopa.html** and **www.fs.fed.us/r6/wenatchee/planning/planmain.htm**

We encourage your comments during the environmental analysis process for any or all of the projects listed in this Schedule. Early involvement assures that the Responsible Official knows your concerns so that they can be recognized and addressed in the analysis and documentation. By expressing an interest in a specific action, you will have the opportunity to receive copies of all environmental documents and decision documents produced for that specific action.

The following schedule covers the period from October 1 through December 31, 2004.

Any changes to estimated decision dates (from prior publications), as well as other changes, additions or deletions are due to a combination of factors: new priorities; a change in circumstance; or the normal accomplishment of work. It also includes several items of information to help you decide if you want to contact the appropriate office for more information or make comment on the proposed activity.

An explanation of each of these items follows:

RANGER DISTRICT

This identifies the location of the proposed action. The main heading will be one of the eight Ranger Districts: Chelan, Entiat, Leavenworth, Lake Wenatchee, Cle Elum, Methow Valley, Naches or Tonasket. Occasionally, a proposed action may involve more than one Ranger District or the Supervisor's Office. In this instance, the Supervisor's Office will be identified as initiating action.

PROJECT NAME AND DESCRIPTION

This identifies the name of the proposed project and describes the type of activity that is planned. Examples of project descriptions include: timber sales, precommercial thinning, trail construction, road construction, fish habitat enhancement, watershed rehabilitation, campground construction, grazing allotment management plan, wildlife habitat improvement, etc.

LEGAL DESCRIPTION

This is the township, range, and section(s) where the proposed action is located so that it can be readily located on a Forest Service map.

CONTACT PERSON

This shows the name of the person leading the team preparing the required NEPA documentation. You can get more information about the project from this individual.

SCOPING BEGINS

This identifies the estimated date that formal scoping (identification) of issues, concerns, and opportunities will begin in the environmental analysis as required by the National Environmental Policy Act (NEPA). You should contact the appropriate Ranger District if you would like to get on the mailing list for information on a proposed activity.

DECISION DATE

This is our best estimate of when the NEPA analysis will be finished and the decision made on whether to proceed with the project. Sometimes the decision date will change due to unforeseen circumstances. Changed dates will be reflected in the next quarterly schedule. The type of decision that is expected is also shown on this line. Sometimes, analysis indicates that a different level of NEPA decision is warranted, and the type of decision will change.

STATUS OF ENVIRONMENTAL ANALYSIS

This item includes dates of any legal notices or decision documents involving the proposed project, and/or how far along the project is within the environmental analysis process.

THE NEPA PROCESS

The National Environmental Policy Act (NEPA) established a process to ensure that good quality, environmental information is available to government officials and to the public before decisions are made. The steps involved in the NEPA process for site-specific project planning are defined by regulation (40 CFR Parts 1500-1508) and by policy (Chapter 1950 of the Forest Service Manual, and Forest Service Handbook 1909.15). The purpose of this process is to ensure that environmental information is available to the public during the steps leading up to a decision, as well as to foster better decisions about activities that affect the environment. The main steps involved in this process are:

Scoping

The procedure by which the Forest Service identifies the important issues and determines the extent of the analysis necessary to make an informed decision on a proposed action. This process includes both public and internal involvement, and is accomplished through public meetings, letters, field trips, or by phone. It is ongoing throughout the analysis.

Identifying Issues

Issues identified during scoping are reviewed through an interdisciplinary process for possible significance, in order to determine those deserving of being analyzed in further depth. The Responsible Official approves the list of significant issues. Those issues determined not to be significant or which have been covered by prior environmental review are eliminated from further detailed study.

Developing Alternatives

This is the heart of the environmental analysis. After the significant issues concerning a proposed action have been identified, an interdisciplinary team develops a range of reasonable alternatives to the proposed action which meet the purpose and need for the proposal, and which respond to the significant environmental issues in different ways. This step is an opportunity to see how the issues have been addressed by the different alternatives.

Analyzing Effects

In this step, the interdisciplinary team analyzes the environmental effects of implementing each alternative. These include effects to the resources (physical and biological) as well as to people (social and economic). The alternatives are compared on the basis of the effects. This analysis is used by the responsible official in arriving at a decision.

Making Decisions

Following completion of the analysis, the Responsible Official issues a decision. The decision document will be different for different kinds of environmental documents. The kind of environmental document produced, in turn, is dependent on the nature of the proposed action and the significance of the environmental effects. Following are different kinds of environmental documents and the corresponding decision documents that may be used:

Environmental Impact Statement (EIS):

A detailed written statement that documents the environmental analysis process. This kind of document is used where the proposed action falls into certain classes of actions predetermined to require an EIS, or where it may have significant environmental effects. Decisions made through an EIS are documented in a **Record of Decision (ROD)**.

Environmental Assessment (EA):

A concise public document that describes the purpose and need for an action, the proposed action, the issues, and the alternatives and their environmental effects. Associated with an EA is the **Finding of No Significant Impact (FONSI)**, which briefly presents the reasons why an action will not have a significant environmental effect. An EA may also lead to an EIS if it is determined that the action could result in significant impacts. A decision made through an Environmental Assessment is documented in a **Decision Notice (DN)**.

Categorical Exclusion:

A category of actions that may be excluded from documentation in an EIS or EA. Scoping occurs on all PROPOSED ACTIONS and many actions that are categorically excluded have a project file documenting the analysis. Most decisions arrived at through a categorical exclusion are documented in a **Decision Memo (DM)**.
